

The Solid Cover's low profile design enhances the appearance of the gutters while eliminating clogged gutters and downspouts.

Patented PVC Design

Our Solid Cover is an excellent value. The bull-nose drainage channel allows rain water to enter the gutter while deflecting leaves and other debris. A breakthrough in gutter protection products. Fits any standard 4", 5" and 6" gutters.

Distinct advantages

An economical alternative to metal type leaf guards or covers. No screws, clips, or sealer strips needed for installation. Solid Cover snaps (retrofits) directly to the top of gutter creating a unique shedding and drainage system. The drip guard shields the face of the gutter, preventing unsightly stains known as 'tiger striping' caused by rain water and debris dripping down the face of the gutter.

How the system works

Water flows around the nose of the Solid Gutter Cover and into the gutter through the slotted channel. Will handle the heaviest of rainfall. Keeps leaves, pine needles, and other debris out of the gutter. No debris accumulation. Leaves and debris are carried away by wind and rain.

Installation

Solid Cover simply slides under the shingles and hooks to the front edge of the gutter. No special tools required. For more go to egutter.com/

Specifications

Drainage Capacity:	up to 5" rainfall / hour
Panel Size:	48" x 7 1/4"
Fits:	4", 5" and 6" standard gutters
Weight Per Panel:	0.9 lbs. / 409 grams
Material:	Made of rigid PVC
Colors:	White or Clay
