

Our Pro 5-K Gutter Machine Packs The Best Warranty In The Industry!

Best Drive In The Industry

The exclusive "Machine Within A Machine Design" separates the Grover Pro 5-K gutter machine from all others. This feature prevents the weight of the gutter coils from reacting on the working parts of the machine. The frame to which the gutter coils are attached is a completely separate unit from the working parts of the machine.

Distinct advantages

The Pro 5 K also has spring loaded roller stations allowing you to run different material with virtually no adjustments. This drive feature creates a constant load on the materail delivering greater versatility when forming 16oz. copper, .024 to .032 aluminum and 26 Gauge galvanized steel .

Easy Adjustments

Practically no adjustments required. Minor adjustments for straightness are very easy to make and are located at the end of the machine.

Five-Year Warranty

Grover mfg. stands behind the Pro 5-K by offering the only five-year material and workmanship warranty in the industry.

(See actual warranty for details)

Specifcatons

Dimensions: 95" x 18" x 18" (2413mm x 457mm x 457mm)
Shipping Weight: 900 pounds (410 kg)
Operating Speed: 30 Feet Per Minute (10 Meters/Minute)
Guage Capacity: .024" to .032 aluminum, 16 oz. copper, and 26 gauge mild steel
